

AERIAL LIFT CAPABILITY STATEMENT

DUNS 006650717 | CAGE 3N7X6 | swansongroupaviation.com | Professional | Safe | Proven Performance

Corporate Overview

Swanson Group Aviation began as an aerial logging company for its parent company in 1996. Today it is well known in the helicopter lift industry as a premier operator of the Kaman **K-MAX helicopter** performing in many diverse industries. We have worked all over the continental US and the world, including in support of Operation Enduring Freedom in Afghanistan where we operated an unmanned version of the K-MAX.

Core Competencies

Grapple or hook, then relocate payloads up to 6,000 pounds in weight and up to 15,000 feet in elevation.

Construction

Our K-MAX is a **diverse construction tool**, especially for projects with substantial height or those in remote/rough areas. For example, we may lift and place multiple air conditioning units in a short period of time or deliver construction materials including bucketed concrete.

We specialize in **repetitive lift** – the frequent and timely transportation of materials between two points. We have moved a million pounds of logs in a day, for example. We pride ourselves in both our safety protocols and our professionalism.

Construction Operations

Differentiators or Advantages

- Family Owned Small Business
- 24 years of operation
- Excellent safety record
- Self-reliant and mobile operation flying the most reliable helicopter in the world
- Rotational crew schedule ensures operational and safety vitality
- The K-MAX helicopter has a low environmental impact, being not only quiet but emitting minimal rotor wash, both due to its unique inter-mesher rotor design

Present/Past Performance

United States Forest Service
 Department of the Interior
 Lockheed Martin (Afghanistan)
 Kaman Aerospace
 United Aero (Australia)
 Haz-Tech Drilling
 Gwinnup Restoration

Columbia Forest Products
 Enrec Solutions
