

# AIRBORNE GRAPPLE SAW CAPABILITY

DUNS 006650717 | CAGE 3N7X6 | swansongroupaviation.com | Professional | Safe | Proven Performance

## Corporate Overview

Swanson Group Aviation began as an aerial logging company for its parent company in 1996. We have served many diverse industries all over the continental US and the world, including in Afghanistan where we operated an unmanned version of the K-MAX for the US military.

### Airborne Grapple Saw

This unique device is a game-changer in the field of vegetation management. Up until now, we trim trees to keep their limbs and leaves from the distribution and transmission lines. Of course, nature is relentless, which means it requires constant trimming.

With the Airborne Grapple Saw, we don't trim.

**We remove.**

**The entire tree.**

**From the air.**

**And do not let it go until we say to (no falling on the powerline). Watch the video below.**

## Present/Past Performance

United States Forest Service  
Department of the Interior  
Lockheed Martin (Afghanistan)  
United Aero (Australia)  
Haz-Tech Drilling  
Gwinnup Restoration

Columbia Forest Products  
Enrec Solutions  
Boise Cascade  
USAIG  
Georgia Pacific  
PAR Electric

Sierra Pacific Industries  
Aldrich Electric  
San Diego Gas & Electric  
Cal Fire  
Oregon Department of Forestry  
Helico (New Zealand)

## NAICS Codes

481212, 113310, 115112, 115310,  
237130, 238110, 238290, 481219,  
488190

## Industries/Missions

Energy, Disaster Relief, Cargo  
Delivery, UAV, Concrete,  
Construction, Fire Fighting (Bucket),  
Seeding, Hay Bombing
